

LOGIC SESSION ASSIGNMENT - 7

RONAK V KULKARNI

250844520070

Q1.

CODE

```
import static java.lang.System.out;

public class code1_2ndlarSmall {

    static void print2nd(int arr[], int arr_len) {

        int firstmax = Integer.MIN_VALUE, secondmax = Integer.MIN_VALUE;
        int firstmin = Integer.MAX_VALUE, secondmin = Integer.MAX_VALUE;

        for(int num:arr)
        {
            if(num>firstmax)
            {
                secondmax = firstmax;
                firstmax = num;
            }
            else if(num<firstmax && num>secondmax)
                secondmax = num;

            if(num<firstmin)
            {
                secondmin = firstmin;
                firstmin = num;
            }
            else if(num>firstmin && num<secondmin)
                secondmin = num;
        }
        out.println("The second largest number is: "+secondmax+"\nThe Second Minimum Number is:"+secondmin);
    }
}
```

```
public static void main(String[] args) {  
  
    int arr[]={5, 10, 0, 2, 3, 4};  
    print2nd(arr, arr.length);  
}  
}
```

Q2.

CODE

```
import static java.lang.System.out;  
public class code2_2sortedArrCommElements {  
  
    static void printCommon(int []arr1, int []arr2, int arr1_len, int  
arr2_len)  
    {  
        int i = 0, j = 0;  
  
        while (i<arr1_len && j<arr2_len)  
        {  
            if(arr1[i] == arr2[j])  
            {  
                out.print(arr1[i]+" ");  
                i++;  
                j++;  
            }  
            else if(arr1[i]>arr2[j])  
            {  
                j++;  
            }  
            else  
                i++;  
        }  
    }  
  
    public static void main(String[] args) {  
  
        int arr1[] = {1, 3, 4, 5, 7};  
        int arr2[] = {2,3,5, 6};  
  
        printCommon(arr1, arr2, arr1.length, arr2.length);  
  
    }  
}
```
